

accelerating a bank's growth story

A global financial and private banking firm offers its customers retail and private banking, wealth management, and other financial services such as insurance products and financial planning.

Business Challenge

- The company needed to automate their IT networking tasks for remote site deployment and management
- They wanted to simplify operations and accelerate network services
- To do this, they needed to maintain connectivity with high uptime, between their sites

Our Solution

- ViTM SD-WAN, powered by Nokia's Nuage Networks, helped speed up the setting up of WAN services and managed remote sites, using both Multiprotocol Label Switching (MPLS) and broadband internet
- It provided faster access to multi-cloud applications (public or private) and also enabled the customer with multi-transport access across internet, MPLS, broadband and 4G LTE, making the business digital-ready
- Our solution ensured secure deployment in AWS and Microsoft Azure, over the internet or MPLS and our centralised network portal enabled them to seamlessly operate their pan-India WAN network
- Our teams replaced their existing traditional routers with SD-WAN CPEs and connected their offices, remote branches, private data centres and public Cloud providers, with just one solution

Business Impact

- Our cost-effective and agile solutions enable the firm to get their sites up and running within hours rather than weeks
- Our SD-WAN solution accelerated their service delivery by enabling them to manage network and security policies throughout their WAN network
- The customer experienced a reduction in their operating overheads at remote sites
