

solving complex matters with simple solutions

A cloud and unified communications service provider, offering cloud connectivity, business internet, unified communications and IT services to their clientele.

Business Challenge

- Connecting to their remote sites and corporate WAN had become very time intensive and complex. This was mainly because they used multiple networking technologies to connect and manage their remote sites
- They also faced challenges while reaching out to a larger VPN market

Our Solution

- Vi™ SD-WAN, powered by Nokia's Nuage Networks, helped speed up the setting up of WAN services and managed remote sites, using both Multiprotocol Label Switching (MPLS) and broadband internet
- It provided faster access to multi-cloud applications (public or private), making the business digital-ready
- It also enabled the customer with multi-transport access across internet, MPLS, broadband and 4G LTE
- Our centralised network portal enabled them to operate their pan-India WAN network
- The solution also ensured secure deployment in AWS and Microsoft Azure, over the internet or MPLS
- Our teams replaced their existing traditional routers with SD-WAN CPEs
- We connected their offices, remote branches, private data centres and public Cloud providers, with just one solution

Business Impact

- Our SD-WAN solution reduced the time and complexity involved in setting up remote sites. They can now automate the provisioning and commissioning of remote VPN sites
- The customer's service delivery has now improved, with seamless connectivity and the ability to remotely manage sites using both MPLS and local ISP connections.
