

web security that evolves with your business

Secure business internet access using
real-time protection.

Introducing Web Security

As your business scales in this digital era, it must rely on
equally-evolving security to protect users and business data from
cyber threats – especially when connected to the internet.

Introducing **Web Security** – your first line of defence against online
threats. It provides complete security for internet activity on and off
the corporate network, and blocks threats before they reach your
network or endpoints.

How does Web Security get the job done?

First line of defence against threats

Enforces security at the DNS and IP layers to block requests
from malicious and unwanted destinations

Real-time protection

Blocks requests from malicious destinations (domains, IPs, URLs) even
before a connection is established and enforces thorough web usage policies

Visibility & Protection

Provides visibility needed to protect internet access across all network devices, office
locations, and roaming users

Threat Intelligence

Utilises patterns of internet activity to automatically identify attacker's infrastructure for
proactive defense

Simple deployment

Eliminates the need of hardware/software

ISO 27001 Information Security Management System Standard certified

How does it exclusively benefit your business?

- Broad, reliable security coverage across all ports and protocols
- Secure web connection on and off network
- Simplified, rapid deployment with flexible enforcement levels
- Immediate value and low total cost of ownership
- Single dashboard for efficient management
