Vi™ business

INTEGRATED I●T

Vi™

where everything is connected

Connect and monitor your infrastructure assets, to ensure continuous and seamless operations
Our **Smart Infrastructure solutions** intelligently connects your workplace or factory machines, assets, and people to deliver seamless operations. But what is truly impressive is its ability to unlock opportunities for cost optimisation and new service revenue.

range of Smart Infrastructure Solutions

Remote HVAC Monitoring

This solution optimises the generation, distribution, and consumption aspects of building cooling systems. It not only saves energy, but also contributes to hassle-free monitoring of climatic conditions, remotely.

Connected Chiller Monitoring

Designed to help OEMs monitor diagnostic parameters of their chillers in real-time, using intuitive platforms with predictive maintenance and remote diagnostics capabilities. Monitor the performance of your chillers from anywhere and predict when a chiller needs servicing — because uptime is everything.

Connected Cold Cabinets

This helps manufacturers, like you, track the status and condition of their geographically distributed freezers for efficient maintenance. It sends real-time alerts when condition thresholds are violated so that you can act quickly.

Remote Cold Cabinet Monitoring

Improves food or perishable goods safety and automates compliance reporting, with continuous freezer temperature monitoring, real–time alarms and digital records. The solution helps you save significantly through reduced spoilage, increased energy efficiency, and better location tracking.

benefits for business

Remote Monitoring: Collect, monitor, & analyse real-time data 24x7 remotely and utilise the solution's proactive actionable insights
Predictive Maintenance: Enjoy data-driven predictive maintenance, and schedule it based on real-time usage

Condition-based Performance Analysis: Access real-time report performance, parameters correlation, anomaly detection & historical analysis

Hassle-free Deployment: Ensure secured IoT connectivity deployment in distributed geographies

Seamless Enterprise Integration: This solution supports all key industrial protocols and integration with ERP
