Managed Wi-Fi

Hewlett Packard Enterprise

unmatched connectivity. unbreakable security.

Switch to AI-Powered **Vi Business Managed Wi-Fi** with robust analytics **for business, non-stop.**

#ReadyForNext

Managing Wi-Fi in a fast-moving business world takes more than just speed. It demands smart, end-to-end management and orchestration for scalability and complete control across every touchpoint.

Our **AI-powered Vi Business Managed Wi-Fi** delivers exactly that. Built in partnership with **HPE Aruba Networking**, it delivers seamless **wireless LAN connectivity**, robust security, and end-to-end network control so your operations stay agile and efficient. From planning to deployment, analytics, and 24/7 monitoring, it's everything your business needs to stay connected, secure, and #ReadyForNext.

From setup to support, we manage it all for your business

Consultation
Expert guidance to assess needs, align solutions, and plan for scalable growth.

Design
Optimised network planning through site surveys, RF heatmaps, and tailored solution engineering.

Service delivery
Swift deployment of switches and access points with expert installation, seamless configuration, and WAN integration.

Automation
AI-driven automation combined with ClearPass for faster setup, self-care device onboarding, policy-based controls, and smarter network performance.

Service assurance
24/7 monitoring, secure access, change management and continuous performance management.

Smart, end-to-end network management, powered by HPE Aruba Central Management Platform

A cloud-native platform for end-to-end management, visibility, and control of your enterprise network infrastructure.

Unified Infrastructure Management
Manage access points, switches, SD-WAN, and VPNs from a single, unified console.

AI-powered Analytics & Automation
Automate provisioning, insights, and network operations with built-in AI and ML.
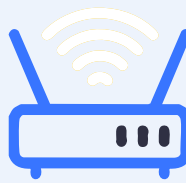

Built-in Security
End-to-end threat management with continuous monitoring and policy enforcement.

Extensibility
Easily integrate with existing IT systems via open APIs, microservices, and webhooks.
